

Phishing Quiz

Email Security Awareness

Phishing is the fraudulent practice of sending emails purporting to be from reputable companies in order to induce individuals to reveal personal information, such as passwords and credit card numbers.

Phishing is an all too real threat to your organization.

Nextworks encourages our clients to conduct a brief annual (or biannual) anti-phishing simulation to maintain awareness of phishing attempts.

Paranoia is healthy in this regard. “When in doubt, throw it out”, or ask Nextworks’ help desk at support@next-works.com.

Please take a few minutes to go through this quiz and see how you do. The process won’t take long and will guide you to being more aware of common scams.
